

MultiFat

www.multiphysics.com

MultiFat is a powerful and robust fatigue-life calculator to solve any type of stress-history in the multiaxial domain for isotropic metallic materials

MultiFat offers full flexibility since it can potentially work with all types of S-N curves and mean stress corrections. The tool is based on an MS-Windows executable file and simple I/O text files.

The **MultiFat** Team will be glad to satisfy requests to adapt the software to the specific Users needs: **MultiFat** is submitted to constant improvement, to reach the greatest possible ease of use and the simplest applicability in everyday industrial problems.

The **MultiFat** Team is more than happy to receive any kind of comment, or suggestion: this will allow us to improve our work.

The commitment of the **MultiFat** Team is to keep the tool available at an extremely low cost. **MultiFat** is offered in different versions in order to best fulfill the needs of the Customers: see our page on www.patreon.com/multiflat
